- SOC / Inland REOC remains activated in support of 2014 Drought

WEATHER

WEATHER SYNOPSIS BY REGION:

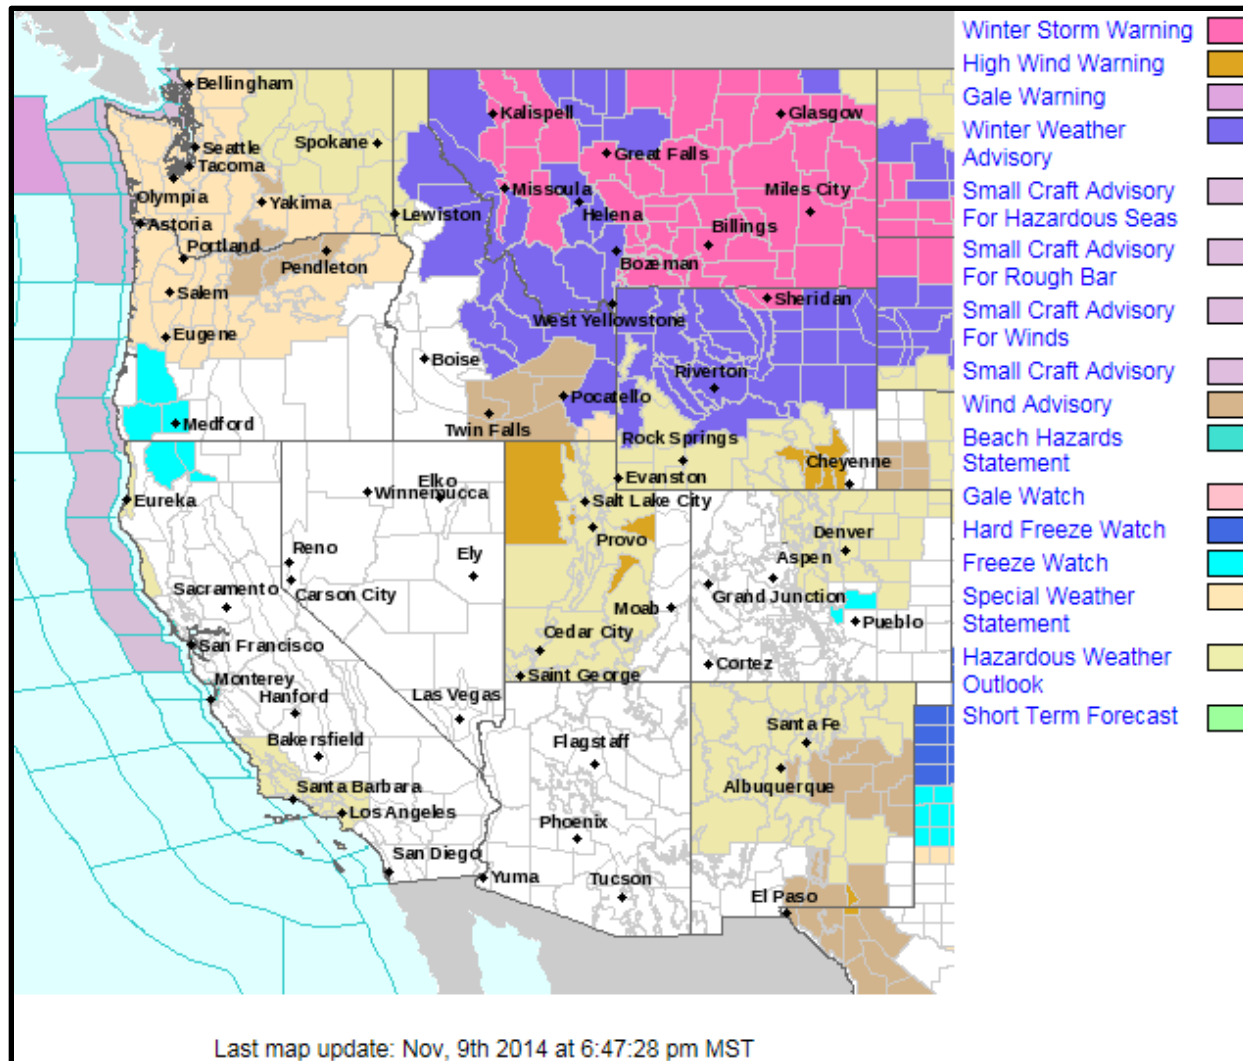

NORTHERN CALIFORNIA:

Warm and dry conditions continue across interior Northern California through the early portion of the week as high pressure remains over the area. Breezy north winds develop across the northern portion of the area behind a dry cold front passing to our east Monday. The next chance of precipitation expected late in the week.

SOUTHERN CALIFORNIA:

The strong ridge of high pressure centered off of the California Coast will weaken bringing a cooling trend and an increase in humidity to the region through Tuesday. The cooling will be modest today, with mid 60s to mid 70s in the mountains and upper 70s and 80s in the valleys. Minimum humidity will increase to 12% to 25% away from the San Joaquin Valley and coastal areas today. Winds will be southwest to northwest 5 to 15 mph this afternoon. The current shallow marine layer will deepen rapidly causing morning low clouds and fog to move over most coastal valley locations by Monday morning and over the lower coastal mountain slopes by Tuesday morning. Zonal flow will bring near to a little below average temperatures and high humidity to most of the region Tuesday through Friday. Scattered showers with light rainfall totals look likely across most of Central California Wednesday night through Thursday afternoon. Westerly winds of 15 to 25 mph with gusts to 40 mph will surface across the desert passes tonight through Friday afternoon. A weak ridge of high pressure will build into California from the Pacific Ocean bringing a warming and drying trend to the region next weekend.
